SUMMARY

Artificial Intelligence & Data Science undergraduate with hands-on experience building production-oriented AI-ML and full-stack cloud systems. Experienced in Python, FastAPI, React, cloud deployment, containerization, MLOps, and agentic AI, with strong foundations in data structures, algorithms, operating systems.

TECHNICAL SKILLS

- Languages : Python, Java, C
- Backend & APIs : FastAPI, Spring Boot, REST-ful APIs, SQLAlchemy, JDBC
- AI & ML : Scikit-learn, XGBoost, PyTorch, TensorFlow, Pandas, NumPy
- Agentic AI : Google ADK, LLM Tool Calling
- MLOps : MLflow, DVC
- Cloud & DevOps : AWS, Docker
- Databases : MySQL, AWS RDS
- Version Control : Git, GitHub
- CS Concepts : DSA, OOP, Operating Systems

EDUCATION

K L UNIVERSITY	JUL 2024 - Present
Bachelor of Technology in Artificial Intelligence and Data Science	CGPA: 9.07
Specialization: Generative AI for Agentic & Multi-Modal Intelligence	
BHASHYAM JUNIOR COLLEGE	JUN 2022 - APR 2024
Intermediate , MPC	percentage: 94.5
B.V.M (E.M) AIDED HIGH SCHOOL	JUN 2021- MAY 2022
SSC	percentage: 96.1

PROJECTS

AI Risk Manager : LossLess Engine	Agentic AI, ML & MLOps
- Engineered an AI risk management platform that combines an ensemble of XGBoost and neural-network models with an agentic investigation layer to assess transaction risk, generate evidence-based explanations, and recommend defensive actions. - Built a reproducible ML pipeline with DVC and MLflow, covering dataset versioning, feature engineering, experiment tracking, model parameters, metrics, SHAP-based explainability, model registry, and controlled promotion of validated models to production. - Designed a cost-sensitive risk decision engine optimized around precision, recall, PR-AUC, false-positive/false-negative trade offs, and expected transaction loss, with held-out evaluation to validate production model performance. - Deployed containerized ML, agent, and FastAPI services with Docker, integrating MySQL for transaction/outcome data and enabling the deployed system to support model inference, agentic investigation, feedback collection, and subsequent model retraining. - GitHub Repository : github.com/Y-K-SAI-SRIKAR/LossLess-Engine	
NexVitals Customer Support Portal	React, Backend & Api's, Cloud
- Architected and deployed a full-stack customer support portal using React, Spring Boot REST APIs, and AWS RDS with JWT authentication, RBAC, CORS security, and multi-tenant data isolation. - Integrated Gmail API with OAuth 2.0 and a multilingual AI chatbot to automate customer notifications, subscriber updates, and first-line support interactions. - Optimized backend data access by eliminating N+1 query patterns and tuning RDS connection pooling for reliable production workloads.	

CERTIFICATIONS

AWS Certified Cloud practitioner

Jun 2026

- Credential ID : [ef5fd1519294452c98639dbe8bbc752e](#)
- Verify at : [aws.amazon.com/verification](#)

LEADERSHIP & EXTRACURRICULARS

Startup Innovation Weekend (SIW) Cambodia 2026 : "Strategic Solver" Delegate

MAR 2026

- Selected as a "Strategic Solver" delegate among ASEAN startups at Startup Innovation Weekend Cambodia 2026, representing NexVitals and contributing to startup innovation and regional healthcare technology discussions.

Inceptrix 2.0 Hackathon

FEB 2026

- Secured Top 5 at Inceptrix 2.0, Jain University with IVERAS, an IoT-based system that auto-dispatches ambulances upon accident detection, integrating IoT, Web, AI/ML, and Cloud.
- Led the AI&ML and Cloud stack: developed an emergency chatbot (Google ADK), Accident Severity Classifier, Nearest Path Suggester, and Route Compliance Verifier with cloud-based deployment.
- Coordinated communication between IoT edge devices and cloud services to maintain low-latency, reliable detection-to-dispatch response under real-time conditions.

CodeSpark 2025 Hackathon

OCT 2025

- Built and integrated IoT and cloud components for a Smart Campus Ecosystem covering AQI monitoring, IoT mesh networking, and an interactive plant dashboard.

Core Technical Member @ Aprameya Autonomous Systems Club

AUG 2025 - JUN 2026

- Implemented A* and RRT path-planning algorithms for obstacle rich autonomous navigation, applying graph traversal, heuristic search, and complexity-aware design.

DEVELOPER PROFILES

- CodeChef : Solved 800+ problems : [codechef.com/users/kl2400080069](#)
- HackerRank : Solved 100+ problems : [hackerrank.com/profile/KL2400080069](#)
