SUMMARY

Artificial Intelligence & Data Science undergraduate specializing in backend systems and distributed computing. Strong fundamentals in data structures, operating systems, and algorithm optimization. Experience architecting scalable cloud systems, REST APIs, and distributed Systems infrastructure. Seeking **SDE internship** to build production grade systems at scale.

TECHNICAL SKILLS

Programming Languages : Python, Java, C
Libraries : Pandas, Numpy, Matplotlib, Tensorflow, NLTK
Backend & APIs : SQL, JDBC, SpringBoot, RESTful APIs
AI & ML : Machine Learning
Cloud & Devops : AWS, Docker
AI Agent Frameworks : Google ADK
Version Control : GIT, GITHUB
CS Concepts : DSA, OOP, System Design, Operating Systems

EDUCATION

K L UNIVERSITY Bachelor of Technology in Artificial Intelligence and Data Science <i>Specialization: Generative AI for Agentic & Multi-Modal Intelligence</i>	JUL 2024 - Present CGPA: 9.07
BHASHYAM JUNIOR COLLEGE <i>Intermediate , MPC</i>	JUN 2022 - APR 2024 <i>percentage: 94.5</i>
B.V.M (E.M) AIDED HIGH SCHOOL <i>SSC</i>	JUN 2021- MAY 2022 <i>percentage: 96.1</i>

PROJECTS

NexVitals Customer Support Portal – Architected and deployed production-grade portal with React frontend, Spring Boot REST API, AI chatbot, and AWS RDS database; implemented JWT authentication, CORS security, and role-based access control – Integrated Gmail API for email notifications (OAuth 2.0), NexBot microservice for multilingual customer support, and automated subscriber updates. – Deployed across 3 cloud platforms (Vercel, Render, AWS) with CI/CD pipelines; achieved zero-downtime deployments through Docker containerization, environment management, and comprehensive production testing. – Designed REST API with stateless session management; implemented query optimization reducing N+1 queries; tuned RDS connection pooling; architected role-based access control (RBAC) for multi-tenant isolation. – Service available at : support.nexvitals.in	React, Backend & Api's, Cloud
IVERAS : Automated Emergency Dispatch System – Architected a distributed, fault-tolerant system integrating IoT sensors, an AI/ML inference service, and a cloud-hosted dispatch pipeline to auto-detect accidents and trigger real-time ambulance routing. – Built and led the AI/ML and cloud components: an emergency-response chatbot (Google ADK), an accident severity classifier, a nearest-path suggester, and a route compliance verifier; deployed as independent, monitored cloud services. – Coordinated communication between IoT edge devices and cloud services to maintain low-latency, reliable detection-to-dispatch response, ensuring consistent performance under real-time conditions.	Incepatrix 2.0 Hackathon, Top 5
Accident Severity Detection System – Built a full-stack ML web application classifying road accident severity (Mild/Moderate/Severe) using a supervised CV model, with a synthetic-image authenticity filter to reject manipulated inputs. – Designed a Python/Flask backend serving TensorFlow/Keras inference, with a file-monitoring service (Watchdog) handling asynchronous image ingestion and triggering real-time prediction updates. – Containerized both services into a single Docker image using Supervisor for process management, enabling one-command deployment via DockerHub.	Machine Learning & Image Perception

CERTIFICATIONS

AWS Certified Cloud practitioner – Credential ID : ef5fd1519294452c98639dbe8bbc752e – Verify at : aws.amazon.com/verification	Jun 2026

LEADERSHIP & EXTRACURRICULARS

Startup Innovation Weekend (SIW) Cambodia 2026 – "Strategic Solver" Delegate

MAR 2026

- Selected as a "Strategic Solver" among elite ASEAN startups for NexVitals IoT MedTech platform; recognized for potential to create lasting business impact in Southeast Asian healthcare market.
- Representing India's startup innovation at regional summit (April 24–26, 2026); positioning NexVitals for ASEAN market expansion and cross-border B2B partnerships in emergency response infrastructure.

Inceptrix 2.0 Hackathon

FEB 2026

- Secured Top 5 at Inceptrix 2.0, Jain University with IVERAS - an IoT-based system that auto-dispatches ambulances upon accident detection, integrating IoT, Web, AI/ML, and Cloud.
- Led the AI/ML and Cloud stack: developed an emergency chatbot (Google ADK), Accident Severity Classifier, Nearest Path Suggester, and Route Compliance Verifier with cloud-based deployment.
- Coordinated communication between IoT edge devices and cloud services to maintain low-latency, reliable detection-to-dispatch response under real-time conditions.

CodeSpark 2025 Hackathon

OCT 2025

- Participated in CodeSpark 2025 Hackathon at KBN College, developing a Smart Campus Ecosystem with modules spanning AQI monitoring, IoT mesh networking, and an interactive plant dashboard.
- Contributed to both hardware and IOT cloud integration, collaborated effectively as a team, and received positive feedback highlighting strong effort, innovation, and teamwork.

Core Technical Member @ Aprameya Autonomous Systems Club

AUG 2025 - JUN 2026

- Actively developing foundational skills in Machine Learning and Artificial Intelligence through hands-on practical application and project execution.
- Collaborating within a technical team structure to explore and implement solutions in relevant AI & ML fields, enhancing teamwork and technical problem-solving abilities.
- Implemented A* and RRT path-planning algorithms for obstacle-rich navigation, applying graph traversal, heuristic search, and complexity-aware design in a practical robotics context.

DEVELOPER PROFILES

- CodeChef : Solved 750+ problems : [kl2400080069](#)
- HackerRank : Solved 100+ problems : [KL2400080069](#)
- LeetCode : Solved 40+ problems : [KL2400080069](#)
